The free design of the game of fire has put this game compared to the popular Babbage Land game. Graphics for a free fire game is quite average for pubg, and resemble the shape of furniture such as the appearance of the tables and the foggy scene of the houses. However, the game works very without problems on phones that do not have a powerful processor like the pubg game. And you'll find the game very smooth on your phone more than the PUBG, and you will not notice a fall of the frames as happens to Pubg sometimes. This, of course, depends on what you prefer, if you prefer fluid performance, you should play free, but if you prefer high quality graphics, you have to play pubg. You will find some strangeness when your player turns around the map or when you bring a weapon. Weapons in free fire are similar to the family game Pubg, but free fire excels in the presence of laser weapons that you won't find to Babbage. Below is a list of the most important weapons of the game. game.
